

## BEAUTIFUL EYES

Protecting the eyes from the sun by using good quality sunglasses and making sure your eyebrows are also shielded from the sun (the eye contour can produce pigmentation spots caused by sun damage) is always a must to avoid premature ageing around the eyes.

Using gentle eye make-up, quality eye-makeup removers and being gentle with the delicate skin around the eyes is essential.

Daily use of eye care products will help hydrate and soften fine lines and reduce puffiness.

Whether you wish to enhance your eyes with an eyelash tint, eyebrow tint and shape, smooth fine lines or reduce puffiness and dark circles, a number of gentle treatments are available at Sentosa.

Specialist treatments using gentle MonuSkin natural botanicals and concentrated ampoules, serums, gel masks, collagen and Micro-current/Galvaderm electro-therapies together with home use of eye gels and/or eye creams can produce a visible difference.

Sentosa has a wide range of products to help care for the delicate eye area and to enhance your natural eyelashes and brows:-
