

ADVANCED COSMETIC PROCEDURES - using ELECTROLYSIS

Effective treatment for skin disorders and blemishes

Using electrolysis, a wide diversity of skin blemishes can be quickly and easily treated with immediate and effective results offering an eventual blemish free smooth skin.

Results are often instantaneous, pleasing and life enhancing.

Treatable Skin Blemishes

Latin Name	Common Name
Telangiectasia	(Thread Veins)
Cherry Angiomas/Campbell de Morgan	(Blood Spots)
Papillomas	(Skin Tags)
Seborrhoeic Keratosis	(Senile Warts)
Milia	
Warts	
Spider Naevus	

Advanced Cosmetic Procedure treatments are safe and effective. Length of treatment very much depends on the problem and your electrolysis specialist will advise you during consultation.

The blemished area must not be over-treated and your skin reactivity will be taken into account. Spacing technique and treatment intervals will be carefully considered in a treatment plan by your specialist as well as your requirements, needs and wishes

For further details, please ask Joanna Edmonds at Beauty at Sentosa who will be happy to offer you a complementary consultation where you can discuss your skin concerns in confidence.
